Lausanne, Switzerland – September 1st, 2025 – Flybotix, a global robotics company specializing in drone-based solutions for the inspection of confined-space of industrial and civilian assets, announced today that it has raised close to USD 10 million in a Series A extension round. The financing was led by a renowned family office with a strong focus on technology investments, with the participation of existing investors led by Greeneering Invest AG.

Since its inception, Flybotix has made significant strides, including the launch in summer 2024 of the ASIO X, its second-generation drone-based solution, that builds on the company's pioneering technology and adds Flybotix own SaaS offering. The company has also broadened its distributor network to more than 30 countries and established partnerships with municipalities and large groups across various sectors. This additional funding will enable Flybotix to scale the commercialization pipeline, accelerate product development and expand its team to meet growing demand for safer and more efficient indoor inspections.

"This financing represents a major milestone for Flybotix," said Samir Bouabdallah, CEO & Co-Founder of Flybotix. He adds "We are thrilled to welcome our new investors and deeply grateful for the continued support of our existing ones. This vote of confidence in Flybotix team, backed by new funding, will help accelerate the global deployment of the ASIO solution, enhance its capabilities, and enable us to deliver safer, more efficient inspection solutions for industries where reliability is essential."

About Flybotix

Flybotix is a global robotics company headquartered in Lausanne, Switzerland. Founded in 2019 by Samir Bouabdallah and Alexandre Cherpillod, the company's mission is to *reduce risks for humans & the planet*.

Its flagship ASIO solution combines advanced, patented drone technology with a dedicated SaaS platform, enabling safer and more efficient inspections across multiple sectors such as energy production and water infrastructure. With the longest flight time on the market, greater payload capacity, and an integrated software ecosystem that delivers actionable insights, ASIO sets a new standard for industrial inspection.
