Lausanne, Switzerland/Bismarck, North Dakota – February 13th, 2026 – Flybotix, developer of the drone-based ASIO Solution for inspection and digitization of confined spaces, has formalized its long-term US market strategy through a Master Distribution Agreement with Frontier Precision.

Under this agreement, Frontier Precision becomes Flybotix’s Master Distributor for the United States.

The partnership formalizes and expands a collaboration that has already demonstrated strong commercial traction. With this new structure, Frontier Precision assumes responsibility for:

- Master representation of Flybotix in the US
- Development and management of a sub-dealer network
- US-based inventory of ASIO drone
- Provision of Level 1 technical support
- Territory development and market expansion

This agreement marks a structural step in Flybotix’s US market development. By anchoring distribution, support, and inventory locally, the company strengthens its ability to serve industrial and municipal customers deploying confined-space inspection solutions.

“Establishing a master distribution structure in the United States reflects our long-term commitment to this important market,” said Samir Bouabdallah, Co-Founder & CEO at Flybotix. “Industrial customers require more than advanced technology. They expect local accountability, responsive support, and structured market presence. This agreement ensures that foundation is in place.”

For US customers, the new structure provides:

- Local product availability
- Shorter lead times
- Defined and faster technical support channels
- Clear commercial accountability

Frontier Precision brings extensive experience in geospatial, industrial, and infrastructure markets across the United States. As Master Distributor, the company will lead the expansion of Flybotix's presence through a structured sub-dealer network and direct engagement with end-users.

"We view confined-space inspection as a critical evolution in industrial asset management. Flybotix has built a category-defining platform with ASIO X, and our role as Master US Distributor allows us to bring that capability to market at scale — with the local accountability and structured support industrial operators require.

This agreement positions us to lead the US market in indoor industrial drone inspection." said Tony Scott, Executive Vice President at Frontier Precision.

The agreement reinforces Flybotix's strategic focus on the United States as a priority market and establishes the operational framework required for long-term growth.

About Flybotix

Flybotix is a global robotics company headquartered in Lausanne, Switzerland. Founded in 2019 by Samir Bouabdallah and Alexandre Cherpillod, the company's mission is to *reduce risks for humans & the planet*.

Its flagship ASIO solution combines advanced, patented drone technology with a dedicated SaaS platform, enabling safer and more efficient confined-space inspections across multiple sectors such as energy production and water infrastructure. With the longest flight time on the market, greater payload capacity, and an integrated software ecosystem that delivers actionable insights, ASIO sets a new standard for industrial inspection.

About Frontier Precision

Frontier Precision is a US-based technology distributor serving geospatial, infrastructure, and industrial markets. The company provides hardware, software, training, and technical services to public and private sector organizations across the United States, with a strong focus on local expertise and long-term customer support.
